

WinSCP - (SCP/FTP to/from your node to your PC)

1. Download WinSCP Portable. This version requires no installation (which is always a good thing)

<https://winscp.net/eng/downloads.php>

2. Run WinSCP and select New Site, put all the details in (your port may be different but it uses the same SSH port you use to login normally to your node. Click SAVE first before login.

3. After login click Yes here (Only needed to do once) which add the key to your system.

Continue connecting to an unknown server and add its host key to a cache?

The server's host key was not found in the cache. You have no guarantee that the server is the computer you think it is.

The server's Ed25519 key details are:

Algorithm: ssh-ed25519 255
SHA-256: dY88ioUY9yXXWRH0UytlC99OzeaoNO+t5/jkQ
MD5: 9c:69:75:6d:d3:25:e9:65:2c:2a:fd:ff:7f:25:d5:95

If you trust this host, press Yes. To connect without adding host key to the cache, press No. To abandon the connection press Cancel.

Copy key fingerprints to clipboard

Yes

No

Cancel

Help

Your PC to the left and the node to the right. Just double click on the .. on the right hand side to back up a folder and select where you want to go. I always save my data in /temp (which is temporary! so it will get cleaned). You just drag and drop files. Fairly simple.

The screenshot displays a file manager interface with two panels. The left panel, labeled "YOUR PC", shows the C:\ drive with a list of folders and files. The right panel, labeled "YOUR NODE", shows the /home/nodeadmin/ directory with a list of files and folders. A red arrow points to the ".." directory in the "YOUR NODE" panel.
